

At the request of a renowned distillery based in the Middle East, ALTECH has devised an interesting system for applying 3 labels - front, back, and shoulder (in phase) - to glass bottles.

Machine:	ALline C + 3 ALritma M
Products:	Glass bottles
Labelling:	Front, back and shoulders
Speed production:	60 bottles/min.

ALline C with 3 ALritma M label applicators

Products

The customer needed to apply labels of different formats to a wide range of bottles. The label sizes of every product are different. For this reason, the linear system - in this case an ALline C - is equipped with two ALritma labelling heads for body labels as well as with a third head for shoulder labels. Body labels - placed on the front and back of each bottle - are first applied and then perfectly adapted to the product surface using brushes. The same technique is used for shoulder labels, which are applied by means of a swinging device.

The system is extremely flexible and requires just a few, precise operations to label numerous bottle types and formats.
